Specifying Engineered Wood Products for Performance

1 Learning Hour | AIBC 1 Core LU | AIA 1 LU |
BC Housing 1 CPD, Informal (Webinar)

Description:

Engineered Wood Products (EWP) are commonly used as primary structural members in projects throughout BC. Although typically designed by Structural Engineers, they also play a vital role in vibration, acoustics, thermal, and fire performance. This session will introduce you to the benefits and possibilities of Engineered Wood Products and help you explore ways to engage with your Structural Engineer to improve the intended design and product performance in your next project. *This session will be presented by an industry professional from Weyerhaeuser.*

Learning Objectives:

1. Explore design considerations related to moisture, acoustics, thermal, and fire performance when working with Engineered Wood Products
2. Discover types of Engineered Wood Products available and how they are used in advanced floor and wall systems
3. Learn about factors impacting floor vibration and considerations for meeting customer expectations
4. Explore how to maximize product performance and reduce costs in your next project through specification and coordination with project stakeholders
